Package Dyeing Machine (Lab)

Laboratory-type package/cone dyeing machine.

Model technical data

1	Max bobbin diameter is 220 mm; max bobbin length is 400 mm.
2	It has a PLC controller and all works automatically.
3	Overall dimensions (W × D × H): 1025 × 750 × 1050 mm.
4	Electrical supply: 380 V AC; frequency, phase and power are specified for the delivery configuration.

Physical specifications and utilities

Electrical supply	Electrical supply: 380 V AC; frequency, phase and power are specified for the delivery configuration.
Power / connected load	Approx. 6000–12000 W connected load for preliminary planning.
Overall instrument dimensions	Overall dimensions (W × D × H): 1025 × 750 × 1050 mm.
Instrument weight	Approx. 180–280 kg net.
Gross / shipping weight	Approx. 223–375 kg gross; estimated packing allowance.
Lab requirements	Water supply and drain; hot water, water quality and plumbing capacity depend on order configuration.

Dimension order and approximate values are stated in each row. Packaging data are separate from instrument dimensions and net mass. Approx. rows are preliminary engineering estimates based on comparable equipment and function/capacity; they are not verified manufacturing measurements or standard requirements. Installation and shipment are finalised against the approved drawing and nameplate. Estimate scope: base product / one unit; external computer, bench and auxiliary plant excluded.

Specifications, dimensions, and power requirements are approximate and subject to change without prior notice for continuous design improvements.

Product technical specifications and images may vary according to manufacturing conditions and applicable standards.

Test and configuration

Measured output / function	Laboratory dyeing and recipe comparison
Parameters selected for the method	Sample load, liquor ratio and temperature-time profile
Verification points	Temperature sensor and programme durations

Control and recording specification

Method-specific software and recording requirements follow. Delivered software modules are defined by the order scope.

- Method code and edition, specimen ID, operator and selected test parameters are linked to the record.
- The calculation and endpoint are defined by the selected method edition; instrument signals and operator assessments are kept distinct.
- Raw measurements, units, valid/invalid test flags and the reported result remain traceable.
- Calculations are checked against known inputs and an independent calculation; sensor channels are checked against calibration values.
